This is Article:

- Bipolar

About term:

- Bipolar

This:

Term bipolar

Is made of

- Two words

bi
and
polar

Two words:

Term bipolar

This term is:

Interesting enough

- For article

Article = Bipolar

Look

Main Term

Term bipolar:

- Main term =

polar
Pg 1

Perhaps we know it

- Term polar

Best example is:

- a pole

Pole like:

- a stick

We know:

wooden pole

Or:

flag pole

Example we know:

north pole

and south pole

Two poles:

- opposites

On earth

So probably pole:

We know

- Term pole

Polar is:

Built from this

- a pole

When we think:

of a stick

Pg 2

Or a pole

There are:

- two ends

Two ends of:

the stick

the pole

ok

Well:

- This spells

Article bipolar

If a stick:

- a pole

Has:

- two ends

Then term:

- bipolar

Refers to:

these two ends

Like:

- opposites

Two ends:

on a stick

a pole

ok

Pg 3

Term bipolar:

Main term =

- polar

Like a pole

Example

One we know:

- term = linear

Linear like:

a straight line

- linear

By definition:

a straight line

- has

two ends

There are:

- two ends

on a line

straight line

So the:

- two ends

are opposites

Like:

one end

and

the other end

By definition:

a straight line

- has

two ends

And:

the two ends

are opposites

Same as:

- linear

ok

Two ends:

on a

straight line

- opposites

linear

Description

Well:

- straight line

We know it

And:

by description

Straight line:

- is

flat

Or plain

Two ends:

- straight line

opposites

Opposites:

- going in

two directions

Opposites:

- like

distant from

each other

opposites

Term we know

This shows:

- known term

One D

One dimension:

- One D

Singular:

- One D

Can say:

flat

Or plain

Pg 6

We can't:

- do much

With a:

straight line

Only:

straight line

Like maybe:

- walk

From:

one end

to the other

Limited:

- straight line

And this:

is what

linear is

Straight line:

- two ends

opposites

Going in:

two directions

opposites

jeez

- limited

Pg 7

Why

So why:

- term bipolar

Why learn it

Said is:

it's related to

- one d

One dimension:

- only

one dimension

Like:

- straight line

with two ends

opposites

Well:

- this

we see it

around

People run:

one d stuff

Linear:

- limited

Like:

locked in

Almost frozen

One D:

- straight line

two directions

opposites

So if we:

see it around

like limited

Then:

- this

as one d

Only one d

Called:

flat
plain

With:

two opposites

Two ends:

of a line

- linear

It is limited

So probably:

- not enough

Story

To close:

- story

This is:

- an example

Something we:

know

Term =

one armed
coathanger

Imagine:

coathanger

With only:

- one arm

Whoa:

the work

I mean:

- it has to

go to one side

But then:

other side droops

With only:

- one arm

Then:

- coathanger

Would always:

- have to run

to other side

To hold it up

- other side

whoa

And said is:

we see it around

As example:

one armed
coathanger

Then it would:

probably have

- No middle

Nothing between:

left and right

The two sides:

for coathanger

If no middle:

- then

no landing place

no place to rest

one armed
coathanger

- Only one arm

whoa

Two sides:

- but

only one arm

whoa

one armed
coathanger

Sign

Ending with:

- sign

We see it around

Linear:

- one d only

Called:

flat
plain

Two ends:

for one thing

Like:

- straight line

But limited

yes
Pg 12

Not enough:

no

We can't:

work with this

So point is:

- term bipolar

Referring to:

- two ends

of a line

Limited:

- not enough

Then:

- only dirt

not arriving

Not directly:

understood

Not comprehended

Like:

one armed
coathanger

If:

- no middle

then

no handshake

no engagement

nada

jeez

Term bipolar:

- limited

not enough

Article = Bipolar
